

CONDITIONAL CONTENT DEMO

Conditional content changes based on available space.

CALLBACK-BASED CONDITIONS

Using `when((ctx) => ctx.availableWidth > threshold)`

WIDE LAYOUT: This appears when width > 1000 dots

VERY WIDE: This text requires 5000+ dots width

SPACEQUERY-BASED CONDITIONS

Using `{ minWidth, maxWidth, minHeight, maxHeight }`

This shows because `minWidth(500)` is satisfied

This requires `minHeight` of 10000 dots

PRACTICAL EXAMPLE: Responsive Content

Content adapts based on available space:

DETAILED VIEW: Name: John Doe Email: john@example.com Phone: 555-1234

SPACECONTEXT PROPERTIES

The callback receives a `SpaceContext` object with:

- `availableWidth`: Total width available
 - `availableHeight`: Total height available
 - `remainingWidth`: Width after siblings
 - `remainingHeight`: Height after siblings
 - `pageNumber`: Current page (0-indexed)
-
