# RELATIVE POSITIONING

=================================================================================

Relative positioning offsets an element from its normal position
while keeping it in the document flow.

## BASIC OFFSET

Normal text for reference
  -> This text is offset 50 dots to the right
Normal text continues in flow

## VERTICAL OFFSET

Reference Line 1
Offset UP by 20 dots (overlapping above)

Reference Line 2 (notice flow is preserved)

## NEGATIVE OFFSETS

    Starting at 100px indent
  <- Pulled LEFT by 50 dots
    Normal position continues

## COMBINED X/Y OFFSET

Normal position marker

    Offset: X+80, Y+10
Flow continues as if no offset

## USE CASE: DROP SHADOW EFFECT

```
 _____
|   SHAD
|_____
+======
|   MAIN
+======
```

## RELATIVE VS ABSOLUTE
